

PROCES VERBAL de l'assemblée générale ordinaire de l'IEFC du 1^{er} mars 2002 à Lisbonne

L'assemblée générale de l'IEFC s'est tenue dans l'amphithéâtre de l'ISA à Lisbonne le vendredi 1 mars 2002.

Elle a été présidée par Michel Arbez et Margarida Tomé.

Au cours de cette assemblée générale, 37 personnes étaient présentes (liste jointe en annexe 3), une feuille d'émargement des personnes présentes a été établie. 18 des 20 organisations membres étaient représentées :

AFOCEL : procuration à Yves Lesgourgues
CAPC : Procuration à Christian Pinaudeau
CEF : Pedro Ochoa
CIF : Fina Fernandez
CRPF Aquitaine : Yves Lesgourgues
EFN : Isabel Quereiquino
ENITAB : Etienne Saur
ESAC : Fernando Pascoa
FERG University College Dublin : Ted Farrel
Gestion Ambiantal, Viveros y repoblaciones de Navarra : Carmen Travers
IKT : Daniel Saenz
INRA : Jean-Michel Carnus
Negociado de experimentacion y sanidad forestal : Fernando Puertas Tricas
NEIKER : Enrique Reiter
TRAGSA : Beatriz Cuenca
UCP : Procuration à Margarida Tomé
Université de Saint-Jaques de Compostelle : Augustin Merino
USSE : Christian Pinaudeau

Ont été soumises au vote les délibérations suivantes :

D1. Le rapport moral du président M. Arbez (Annexe 1) : **Approuvée à l'unanimité**

D2. Le Rapport financier du trésorier M. Turrado, présenté par le directeur C. Orazio (Annexe 2) : **Approuvée à l'unanimité**

Le bureau sortant a démissionné à l'issue de la durée normale de son mandat, et le nombre de postes ouverts est passé de 6 à 8.

D3. L'assemblée a **approuvé à l'unanimité** la désignation du bureau suivant : Margarida Tomé, Christian Pinaudeau, Daniel Saenz, Fernando Puertas Tricas, Jean-Michel Carnus, Joao bento, Augustin Merino, Yves Lesgourgues

Réparti selon les fonctions suivantes :

Titre	Nom:	Signature
Présidente	Margarida Tomé	
Trésorier	Christian Pinaudeau	
Secrétaire	Daniel Saenz	
Vice-président	Fernando Puertas Tricas	
Vice-président	Jean-Michel Carnus	

D4. Pour concilier efficacité et droit, les personnes habilitées à faire fonctionner le compte n°66000134309 ouvert au Crédit agricole de Saint-Jean d'Illac sont : Margarida Tomé (Présidente), Christian Pinaudeau (Trésorier) et Jean-Michel Carnus (Vice président) : **Approuvée à l'unanimité**

D5. Madame Margarida Tomé (Présidente) est habilitée à ouvrir un compte au Portugal au nom de l'IEFC: **Approuvée**

Ont été approuvées les résolutions suivantes :

R1. L'adhésion de l'IEFC à l'EFI (European Forest Institute) : personne n'a souhaité remettre en cause l'adhésion de l'IEFC à l'EFI, l'IEFC sera donc membre de l'EFI en 2002

R2. L'IEFC doit tout mettre en oeuvre pour participer aux événements internationaux majeurs que sont : la conférence de Vienne (4ème Conférence pour la protection des Forêts en Europe), le congrès forestier mondial de Montréal, la conférence internationale du FNUF sur les forêts de plantation en Nouvelle Zélande : **Adoptée à l'unanimité.**

R3. la prochaine assemblée générale de l'IEFC se tiendra à l'ENITA de Bordeaux, la date correspondra au colloque final du projet IMACFORD (autour du 1er mars, 2003).

Ont été discutés les points suivants :

- Le nombre des membres du bureau est passé de 6 à 8 en réponse à une demande de plus forte représentativité régionale.
- L'adhésion à l'EFI : les membres de l'IEFC et l'IEFC lui-même cotisent à l'EFI. Il faudrait envisager un système permettant d'éviter cette double cotisation : tarifs préférentiels pour les membres, adhésion en groupe, ...
- Le montant de l'adhésion à l'IEFC reste inchangé 154 Euros. Les membres n'auront à remplir le bulletin d'adhésion qu'une seule fois et devront envoyer un courrier lorsqu'ils ne veulent plus faire partie de l'association. Il n'est donc plus nécessaire de renvoyer un bulletin d'adhésion tous les ans.
- Changement de statut de l'IEFC : il apparaîtrait souhaitable d'introduire dans les statuts la notion de membre sympathisant ou de membre associé. Mais avant de modifier les statuts, nous souhaitons voir si la possibilité de devenir une association de droit européen se met en place rapidement, ou si l'IEFC reste une association de droit français.
- Le site internet peut être traduit dans plusieurs langues à distance; Peu de gens sont volontaires pour traduire... La base de données-adresses, avec les coordonnées des scientifiques du réseau sera mise en ligne dans l'Intranet.
- Etienne Saur (ENITA) est intéressé par la mise en place d'une bourse d'échanges pour les étudiants, dès que nous aurons plusieurs personnes prêtes à faire vivre ce projet nous pourrons le mettre en place.
- Le travail d'Antoine Colin sur la gestion durable dans les régions de l'arc atlantique est disponible dans l'intranet. Tous les commentaires sont bienvenus avant de le rendre disponible sur Internet. Doit-il être traduit en espagnol et portugais?
- L'atlas forestier avance, il n'est prévu qu'une version dominante anglaise pour l'édition papier. Une version multilingue est prévue sur internet.
- Amelie Castro, directrice d'EUROSILVASUR, a proposé d'accélérer les remboursements des frais de déplacement, en envoyant à Christophe Orazio copie des pièces transmises au responsable régional. **Il est urgent de renvoyer les justificatifs**, et notamment les feuilles de temps pour les membres IEFC afin de justifier du cofinancement des partenaires du projet EUROSILVASUR.
- Pour INTERREG, il va falloir demander aux organismes de cofinancement les attestations avant le dépôt du projet!
- IMACFORD va démarrer en Mai, il est important de trouver des correspondants pour le compartiment qualité des bois et économie. Le groupe « genetica » servira de référence pour le compartiment production de matériel végétal.

Lisbonne le 08/03/02

La Nouvelle Présidente
Margarida Tomé

Le président Sortant
Michel Arbez

RAPPORT MORAL

« Monitoring and sustainable development of cultivated forests
in South Atlantic Europe »

www.iefc.net

Chairman Annual Report (March 2001-February 2002)

M. Arbez

1. Brief history

The European Institute for Cultivated Forest (IEFC), was established as an association, in 1998, on the behalf of the Southern European Forest Owner Association (USSE), essentially funded by the « Eurosilvasur » European project, with the aim to develop and to transfer the scientific knowledge related to the sustainable development of cultivated forests. This project, specifically dealing with plantations in South Atlantic Europe, was identified as Regional Project Centre by EFI (European Forest Institute). At the same time, the executive Board meeting of IEFC, held in November 1999, in Lourizan (Galicia), appointed Christophe Orazio as Director, to plan, coordinate and follow up the interregional activities between Bordeaux, Lisbon, Santiago and Vitoria, as well as to initiate and to develop new international cooperations (Finland, South America, New Zealand). At the moment, 19 member organisations participate to IEFC, which means more than 70 scientists co-operating to the different tasks of the network

.2 Objectives

South Atlantic European regions from Portugal, northern Spain and south-western France represent 16 millions inhabitants, their forests cover around 6 millions hectares and collect annually more than 20 millions m³ of wood. Some of the fast growing species used in plantation are common within these regions:

Maritime pine covers around 2.3 millions ha between Aquitaine (1 M ha), Portugal (1 M ha) and Galicia (0.3 M ha). Eucalypts cover 0.9 M ha equally shared between Portugal and Galicia. Poplars represent 0.1 M ha. Most of these forests belong to private owners grouped into professional organisations (USSE, SYSSO, AFG, Forestis...)

The fast growing species thrive well under mild and moist climates: growth can reach more than 10 m³/ ha/year (maritime pine in Aquitaine, Radiata pine in Euskadi) or even 15-20 m³/ha/year (Eucalypts in Portugal and Galicia, Poplars on rich soils of alluvial valleys everywhere)

Well integrated in the regional economies and cultures, these cultivated forests can sustainably contribute to the economic development, employment in the rural zones, and land management of those regions, as long as sufficient research effort is put in place to improve the general understanding and knowledge on:

- Biogeographic and socio-economic characterisation of the forest regions and regional forestry sectors;

- Wood resources and predictive tools such as models which allow prediction of wood volumes and quality according to silvicultural and biological factors ;
- The effects of those factors on the long term equilibrium of plantation forest ecosystems and health;
- The appropriate level and systems of monitoring (biological and socio-economic factors) and the definition of a certification procedure for the sustainable management of plantation forests and of the wood products derived from those forests.

Our aim is to synthetise the knowledge on mechanisms and models in these research fields, as well as to coordinate and develop appropriate monitoring systems. It is also to adapt the criteria and indicators derived from the Helsinki and Lisbon Conferences, to propose relevant recommendations towards sustainable management and development of the forest-wood industry in these regions. Such an integrated technical analysis must contribute to give stronger scientific bases for the forest certification processes, now on the way in Europe. Such methods and concepts will be transferred and taught to forest owners, managers and students through workshops, training sessions and university courses (DESS « Forêt cultivée » Université de Bordeaux IV, Cursos Internacionales Menendez Pelayo Santiago and Santander). Communication is organised mainly using the internet site of IEFC, "La Lettre de l'IEFC" distributed on the same channel, as well as occasional information's on regional radio and television broadcasting stations (USSE, professional organisations). It is expected that this effort of communication towards the public opinion will reduce the existing gap between a wood producing forest and an ideally natural forest.

3. Member organisations

In 2002, 20 organisations formally belongs to IEFC:

Association FOrêt CELLulose, AFOCEL South West Station, France
 ESAC Coimbra, Portugal,
 Negociada de Experimentacion y Sanidad Forestal de Pamplona, Navarra, Spain,
 Gestión Ambiental y Repoblaciones de Navarra, Spain
 Institut National de Recherche Agronomique-Recherche forestière, INRA-Bordeaux, France
 Ecole Nationale des Ingénieurs des Travaux Agricoles, ENITAB, Bordeaux, France
 Universidade Catholica Portuguesa de Porto, Portugal
 Nekazal Ikerketa Technologia (IKT), Vitoria, Euskadi, Spain
 Estación Florestal Nacional (EFN), Lisbon, Portugal,
 Empresa Nacional de Celulosa (ENCE), Galicia, Spain,
 Instituto Vasco de Investigación y Desarrollo Agrario (NEIKER), Vitoria, Euskadi, Spain,
 Universidad de Santiago de Compostela, Galicia, Spain,
 Centro de Investigación Florestais e Ambientais (CIFA), Lourizan, Galicia, Spain,
 Empresa de Transformacion Agraria, Madrid, Spain
 Centro de Estudos Florestais de ISA, Lisbon, Portugal
 Union des Sylviculteurs du Sud de l'Europe, USSE, International,
 Université de Bordeaux IV-Centre d'Analyse Politique Comparée (CAPC), Bordeaux, France,
 Centre Régional de la Propriété Forestière d'Aquitaine (CRPF Aquitaine), Bordeaux, France,
 University College-Forest Ecosystem Research Group, Dublin, Ireland
 Universidad de Tras os Montes

This consortium is managed, as an Association, with an executive Board of 6 members (of whom, from the creation to now: Chairman Michel Arbez-France, Vice-Chairwoman: Pr. Margarida Tome-Portugal, Vice-Chairman: Pr. Jose Perez Vilarino-Spain). The headquarter is

located in Bordeaux, with 3 Regional Antennas in Lisbon, Santiago de Compostela, and Vitoria.

The annual budget of IEFC, was around 110 000 Euros on the period March 2001-February 2002. Most of the financial corresponded resources came from the European project « Eurosilvasur » and practically half of the expenses originated from the salaries (mainly the Director's salary).

4. The project and its implementation

The thematic work programme is structured through several working groups and sub groups:

- **0 Atlas of forests in South Atlantic Europe** (Co-ordination: Jose Antonio Ribeiro Lopez ESAC, Coimbra, Portugal). This document will present on line, on the IEFC web site, comprehensive information's covering biogeographic descriptions, areas, repartition from nature of property, wood resources and production, criteria and indicators planned to monitor and to certify the forest management, with the corresponding statistic tables and thematic maps necessary to illustrate the description of forests in this part of Europe. The electronic publication planned for this document will be achieved at the end of the second half of 2002.
- **1 Models, indicators and monitoring systems** (Co-ordination: Pr. Margarida Tome, ISA Lisbon, Portugal)

1.1 Growth models, process based models and network of permanent monitored plots (Co-ordination: Pr. Margarida Tome, ISA-Lisbon, Portugal)

This group uses mail exchanges and open periodic workshops to achieve its objectives: the first international workshop was successfully organised in Bordeaux in September 2000. The programme of talk and discussions was attended by 54 participants from 12 countries. The proceedings have been already published by EFI (see section 6). The second workshop is planned in ISA-Lisbon on 6-8 June 2002, in connection with IUFRO, on « Incorporating forest growth models into decision support tools for sustainable forest management », it will be mainly devoted to practical applications. The work of the group is completed by setting up and updating a « forest model data bank », organised and managed by Christophe Orazio (IEFC Director) and Celine Meredieu (scientist, INRA Bordeaux). This useful database is already opened and functional on www.iefc.net. The programme of the sub-task includes exchanges of methods and protocols regarding data collection, between two monitored permanent plots of maritime pine plantation forests in France (INRA) and Portugal (ISA)

1.2 Genetic diversity and biodiversity (Co-ordination: Maria-Helena Almeida, ISA-Lisbon, Portugal)

A directory of organisations, researchers and programmes dealing with genetics and forest tree breeding in South Atlantic Europe, is now practically achieved and the corresponding data will be available on IEFC intranet. This electronic directory is completed, for the interested part of the consortium, by an enriched bank of microsatellite markers of maritime pine. This co-operative bank, useful for genetic analysis, varietal tests, as well as marker-assisted-selection, will be very soon operational.

Preliminary works concerning biodiversity in plantation forests was initiated, including litterature review (see M. Arbez, section 6), inventory and practical test of

feasibility of indicators able to evaluate biodiversity in plantation forests (see Jean Charles Samalens, section 6), as well as experimental measures of impacts of the level of forest tree species biodiversity, on the damages from insects and diseases in maritime pine forest (H. Jactel, INRA Bordeaux scientist and Biscarrosse-Pontenx experimental forests) .A more comprehensive work on this last experimental aspect is planned for the future year, through the expected INTERREG project.

1.3 Forest Health (Co-ordination: Hervé Jactel, INRA-Bordeaux, France)

The English electronic edition of the « Guide of insects and disease damaging forests in South Atlantic Europe » was prepared by Inge Van Helder and will be available on www.iefc.net at the end of March 2002 (see section 6)

1.4 Forest Soil Conservation (Co-ordination: Jean Michel Carnus, INRA-Bordeaux, France).

The group was initiated in 2001 and met twice. It prepares a forest soil information to complete the Atlas, associated with recommendations concerning sustainable management of forest soils: a key element for a safe future of the forest. The three main topics of interest for co-operation have been identified: (i) forest soil indicators, (ii) best management practices (iii), biowaste recycling in forestry.

2 Regional transcription of a forest sustainable management policy, and its technical tools (indicators), at the regional scale. (Co-ordination: Daniel Saenz, IKT, Euskadi, Spain)

A compared analysis of laws and rules dealing with forest sustainable management in the different administrative regions of South Atlantic Europe was performed in 2001-2002 by Antoine Colin (IEFC/ENITAB report, see section 6).

Moreover a network of model forests, concerning 10 experimental sites, with specific thematic approaches and data collection protocoles, was agreed between the Regions and will be proposed to the next INTERREG call for proposal. This approach, involving several « Regional Forest Observatoires » will allow to choose the indicators, the most feasible and regionally the most relevant, to evaluate and to monitor the sustainability of the forest management.

3 Forest socio-economics (Coordination: Pr; Jose Vilarino, Santiago University, Galicia, Spain)

A first study on « Origin, aims and functioning of the forest owner associations » is now coordinated by Pr. Americo Mendes (Porto Catholic University, Porto) in Portugal. The achievement is planned for the end of July 2002.

A second study is on the way with the coordination of ENITA Bordeaux (Coordination: Jean Paul Guyon, Pr. ENITAB) on the perception of the forest importance in the Aquitaine public opinion. The achievement is also expected at the end of July 2002.

A third study initially planned for the coming months with the contribution of CEMAGREF and CRPF Bordeaux, on the social and economic characterisation of the private forest owners of Aquitaine, would have probably to be postponed by lack of interested student.

5 Publications and dissemination of results

Several activities of IEFC have to be reported in this field:

-Proceedings

« Tools and methodologies for fire danger mapping », proceedings of the workshop organised by IEFC and UTAD, March 2001, Vila Real (Portugal),

« Models for the sustainable Management of Temperate Forests », EFI Proceedings No.41, 2001, J.M. Carnus, R. Dewar, M. Tome and C. Orazio Eds

« Risk Management and Sustainable Forestry », EFI Discussion Paper of the Bordeaux scientific seminar of September 2001, to be soon published,

« Strategies de Prevention des Incendies dans les Forêts d'Europe du Sud », Proceedings of an IEFC/USSE workshop, Bordeaux, January 2002

-Reports

J.C. Samalens, 2001, « Estimation d'indicateurs de gestion durable des forêts: étude de faisabilité à l'échelle d'une petite région forestière », ENITAB report.

A. Colin, 2002, « Stratégie régionale de mise en oeuvre de la gestion durable des forêts du sud ouest de l'Europe », ENITAB report, already available on line, in French, on www.iefc.net.

-Technical paper

M. Arbez, « Cultivated forests of south Atlantic Europe, potentials and research needs », EFI News, 2/ 2001

-E-letter:

« La lettre de l'IEFC », 5 issues already published on the web site www.iefc.net

-Electronic publications

Guide of insects and diseases-damaging forests in South Atlantic forests, with pictures and description, biology and control methods for 63 species of insects and fungus, English version to be published in March 2002.

« Models for forests », database of models used or available for trees and forests, C. Orazio co-ordinator, already on line.

"Atlas of forests in South Atlantic Europe", in four languages: Spanish, French, Portuguese and English, on the IEFC web site in July 2002.

-Conference

« Gestión sostenible de los bosques cultivados », M. Arbez, Seminario Asociacion Forestal de Cantabria: Economia y cultura de los Bosques de la Europa del Sur, Santander, 24-25 July 2001.

-Special services

IEFC offers to part of its consortium an « enriched Library of Microsatellite Markers of Maritime Pine », expected to be used for any genetic diversity analysis and/or marker assisted selection related to this species

-Education

Lectures DESS "Environnement, Developpement sylvicoles et gestion de la Forêt cultivée", Université Montesquieu Bordeaux 4: Sustainable management of forest genetic diversity and biodiversity, criteria's and indicators of forest sustainable management: 6 hours, M. Arbez and C. Orazio.

Lectures ENITAB (High School of Engineers for Agriculture, Bordeaux): European forests, 2 hours, C. Orazio

6 Lessons drawn from the Regional Project Centre trial (RPC/EFI)

IEFC clearly benefited with an amplifying effect of the EFI networking, either for enlarging input information's concerning announcements of forest events in Europe, or to better disseminate results of IEFC activities on the RPC and the whole EFI networks. In this sense, links between IEFC and EFI websites, and participation to common conferences or workshops were really successful. I hope that the views (studies, statistics, forest policies, data) from South Atlantic European forests and foresters brought to EFI by IEFC, resulted in a better understanding of the forest questions in this part of Europe. The RPC trial clearly

resulted in a strengthening of the forest and forest research networking and lobbying in Europe.

The poor balance "efficiency/EFI reporting time", and the lack of any funding of the RPC activities by EFI, invite to find new co-operation formulas. More frequent connections and co-operations between EFI partners, as the EFI/RPC meeting organised for the first time in Bordeaux in September 2001, and the future funded co-operative project IMACFORD, associating the existing RPC's and EFI in a common thematic project, will certainly improve the situation.

7 Scientific and practical value of the results and innovations

Models for forests

This performing working group focused on two main tasks:

- Edition and publication by EFI of the proceedings of the first workshop. This workshop succeeded: (i) to review the current use of models in understanding and quantifying the sustainable management of plantation forests; (ii) to encourage links between tree and soil modellers; (iii) to encourage links between researchers and end-users; and (iv) to identify priorities for future research and collaboration. The proceedings present an overview of recent progress in developing and applying models to problems of sustainable forest management. The papers cover the full range from detailed, process-based ecosystem models to empirical growth and yield models and decision support tools. The work achieved in this workshop will be completed by a second one, planned in Lisbon, from 6 to 8 June 2002 and focusing on « Incorporating forest growth models into decision support tools for sustainable forest management »
- Setting up a forest model data base, with an on line inventory of any existing forest models (category: growth/architecture/process based..., input, output, authors, related literature, concerned forest species...), already available on www.iefc.net (item activities)

Genetic diversity and biodiversity

The work in this field, will practically results in a comprehensive inventory of « who is making what » in genetic analysis and forest tree breeding concerning Pines, Eucalypts, and Poplars in South Atlantic Europe, completed by an enriched library of microsatellite markers of maritime pine, usable for genetic analysis and marker assisted selection.

Additionally, IEFC prepared a literature review on genetic diversity and biodiversity in planted forests (EFI scientific seminar, M.Arbez, Lisbon 2000) and discussed during the second workshop of its group genetica « how to associate advanced techniques in biology and sustainable management of planted forest » (Lisbon, February 2002).

Forest soils

Created recently from the idea that the key of forest sustainability lies in soil fertility, this recent group focused first on the forest soils information's, to be integrated in the « Forest Atlas of South Atlantic Europe » available on the IEFC web site on April 2002.

Forest health

The major realisation in this field will concern the « Guide of forest insects and diseases in south Atlantic Europe », to assist foresters in determination, control and prevention of sanitary damages. The English version of this guide is ready today and available on the IEFC web site, soon on March 2002. The French, Spanish and Portuguese versions will follow later on, first on line, then on paper edition.

Indicators of sustainable management

The IEFC study performed by J.C. Samalens and published in September 2001, as ENITAB student report, gives first a literature review on the subject. Moreover, it presents a personal expertise on the feasibility of the usually proposed indicators, from the practical availability of the data, at the scale of a small forest region near Mimizan, in the French Landes of Gascony.

Regional policy of sustainable management

A recent analysis published in French by A. Colin (February 2002), during his stay at IEFC headquarter, as ENITAB student, presents a comprehensive view of legal texts and administrative rules, used for the sustainable forest management, at national and regional level, in south west France, northern Spain, and north and central Portugal. Moreover, the author describes the updated situation of the forest certification (PEFC and FSC) in the different regions of concern.

Planted forests, forestry and society

The review published by Arbez, in the EFI News (2001, n°2) presents the planted forests in South Atlantic Europe and their economic and social aspects. The subject is now being completed in three directions:

- Origin, aims and functioning of private forest owner associations (Pr. Americo Mendes, Catholic University of Porto, Portugal),
- Characterisation of social and economic behaviour of the private forest owners, using ad'hoc questionnaire and sample survey (CRPF and CEMAGREF Aquitaine). This planned study would be only feasible provided the requested student is found.
- Perception of planted forest importance in the public opinion of Aquitaine (ENITAB, and Bordeaux DESS), study planned to begin in March 2002.

8 Future prospects

■

The way is clear for the coming months:

Till the end of July 2002, we have to satisfy our first commitments, which means the achievement of the tasks planned and described within Eurosilvasur and the EFI/RPC project, the preparation of the related technical and financial reports, associated with the corresponding proofs of expenses.

From May to December 2002, our energies will be shared between:

- Participation to the European project IMACFORD leaded by EFI, on « Improving and advancing co-ordination of forest research and development in Europe », as a contribution to the definition of the future ERA (European Research Area) in the field of forest sciences. This project is also the opportunity for us, to prepare an « excellence research network », associating the best-qualified laboratories for 6 years, around an interdisciplinary question: « how to combine technological innovation and forest sustainable management », regarding genetic diversity, silviculture and wood products.
- Organisation of meetings on forest sustainable management, with the Spanish and French partners of the « Pyrenean working community ».
- Organisation of several field workshops in Aquitaine, within a new funded project from « France Foundation » on « how to manage together the country land », around societal perception of the cultivated forest and prevention of conflicts between owners and other forest users (hunters, walkers, bird watchers...)

Final preparation of our INTERREG proposal, concerning a network of 10 experimental forests, to test the practical feasibility, the scientific pertinence and the costs of the proposed indicators to evaluate the sustainable quality of the forest management, at sub-regional and regional scale.

As the stepping down chairman, my views are fuzzier **after 2003**, normally, and of course because it will be the responsibility of the next executive board. Nevertheless, we can freely imagine some general orientations for the future:

IIEFC will play an increasing role at the interface research-development for the forestry sector of South Western Europe and in strong partnership with the forest industry. Improving the scientific knowledge in relation with the sustainable development of cultivated forests and transferring this knowledge to the forest industry and end-users will remain our main goal. In the next four years, the scientific themes identified today will continue to be developed and extended to include wood quality and wood products.

Three main objectives could guide our strategy for the mid-term (2003-2005):

- developing an integrated interdisciplinary research network for the sustainable management and utilisation of fast growing forest resources,
- improving monitoring procedures, SFM indicators and transfer of information to end-users through model forests in link with interregional development,
- facilitating links with tertiary education and improving co-ordination of predoctoral and doctoral training in the forestry sector.

In terms of organisation, IIEFC will probably need to be consolidated as an European based association and should be able to extend its membership in the coming years. Requirements of the 6th European framework for research (ERA) may necessitate modifying the administrative structure of IIEFC. In parallel, collaborations and exchange of people with EFI and with other RPC's will need to be (re)structured and developed, in particular with our Solsona colleagues.

These are the main results of the leaving team, associated with some orientations for the coming months. As member organisations, you shall have to adopt, reject or amend this report.

But from my side, I cannot leave without to tell you, how I was pleased and proud to chair our association since its creation in 1998. I met new friends, and discovered some of the profitable aspects of the sustainable development concept, applied to the forest management. I will also address my warm thanks to USSE, Eurosilvasur and EFI, to the guys and girls working with, and to all IIEFC member organisations, who largely contributed to the whole result, during this susceptible youth period. And last but not least, I will address my friendly thanks to Christophe Orazio, who was, day after day, the efficient organiser of our activities.

Michel Arbez

Commentaires sommaires en anglais:

Resources :

- 50% more than previous year, thanks to EFI 8th conference, and incorporation of **ALL** task fees into account since November EC audit
- main sources : EUROSILVASUR and EFI+DERF for conference, membership only 2%, What about the price of IEFC membership?

Expenses

- advances for our partner : mainly funds for regional centres
- functioning : The main part of the fees is functioning, for all task.
- Investment : actually we are just using our own fund for investment buying mainly computer material
